

Donning Instructions

Donning of the lifejacket should be practiced so the wearer/user becomes familiar with the operation of the lifejacket prior to possible emergency use.

- 1. Insert left arm through harness as shown - make sure front of lifejacket faces away from body. Pass right arm through right side of harness.**

- 2. Swing lifejacket onto shoulders and connect steel buckles in front of lifejacket.**

- 3. To tighten - hold buckle in left hand and tighten by pulling over webbing belt and take up slack until a comfortable fit is achieved. Any excess webbing can be tucked up in under waistbelt.**
